

so **YOU**
WANT TO LEARN
about **COMICS**
DO YOU?

This is Cartoon Movement

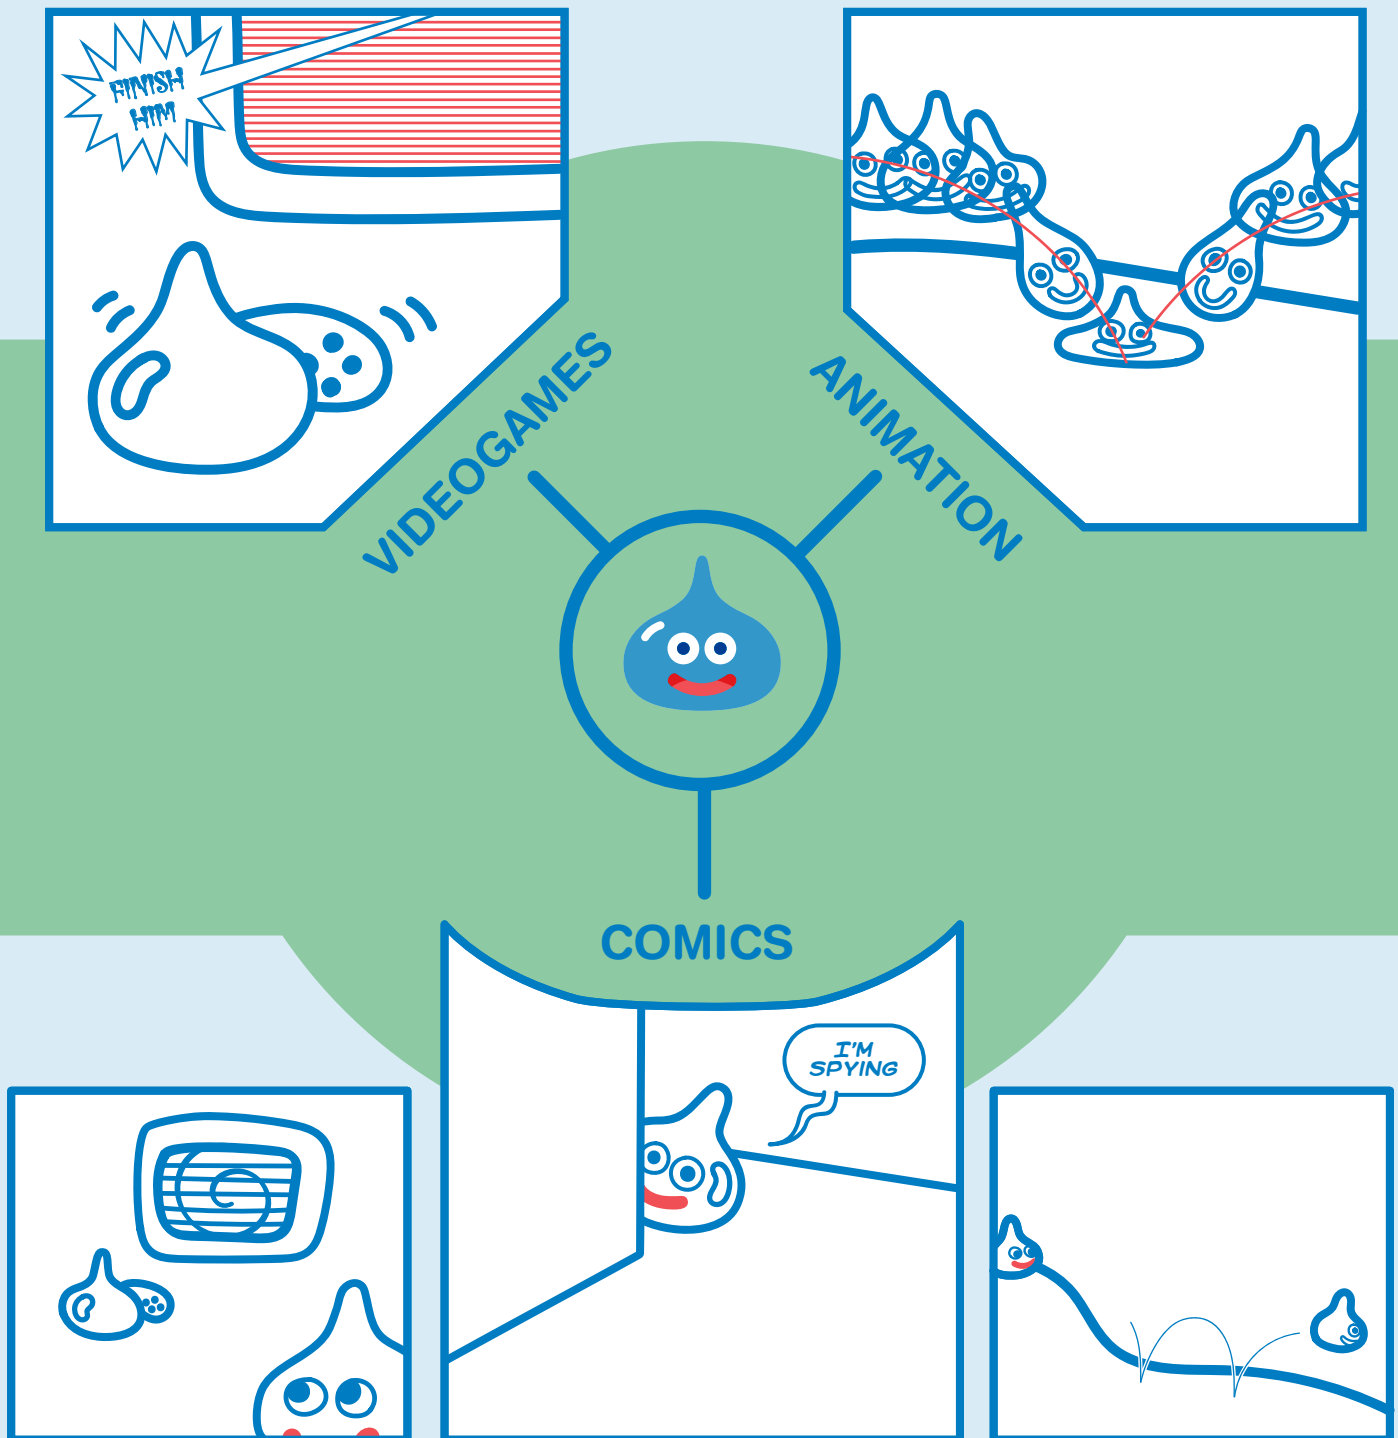

**Well.. actually... this is Goobert.
Goobert is a slime, a race of creatures
designed by the late Akira Toriyama.
Akira Toriyama was a master of cartoon
movement—just like you can be.**

Our concern is cartoons. Cartoons are **abstract representations** meant to evoke an emotional response. Their history is rooted in the development of painting, sculpture, dance, theater, and film.

There are fundamentally 3 different types of cartoon thing.

Interactive cartoons. Currently the most popular type of cartoon.

Durational cartoons. A series of images presented over a set amount of time.

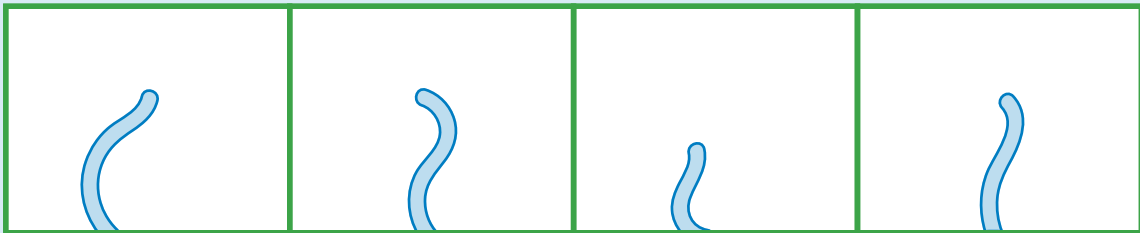

Frozen cartoons. Non-durational sequential (or singular) images. This is the most ancient form of cartoon.

Stillness is the limit of drawings in comics, though it is its soul, and that which moves them.

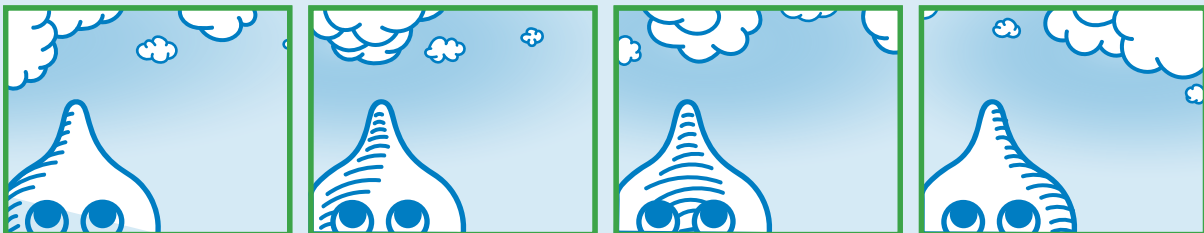

Our purpose in **Cartoon Movement** is to explore how the static and the kinetic meet each other in different ways.

You will learn how to see things from the eyes of cartooning. In turn, cartoons will see from your perspective.

Look at cartoons.

How do they move? How do they not move?

How do they move you? How do they not move you?

says:

Don't stop
at cartoons!
Also look at
real life!

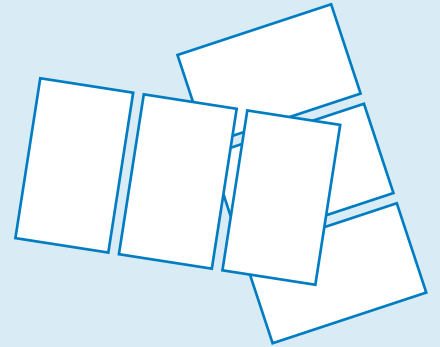

Your most important tool: The Santoro Card

Santoro cards may, at first, appear as humble notecards —but they are really the royal road to **Cartoon Movement**. These devices perfectly mimic the comic panel, with the extra advantage of being highly flexible. There is no end to the combinations you can put them in...

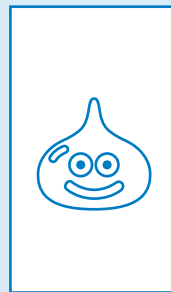

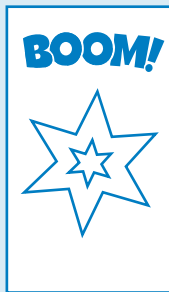

Santoro cards can be
laid out either vertically
or horizontally, whatever
best suits the drawing.

Always experiment with your composition. A small
change in order may yield unforeseen results.

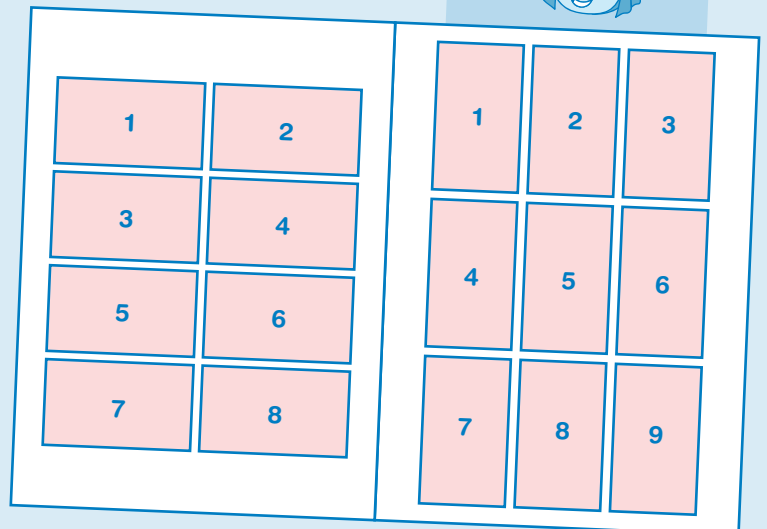

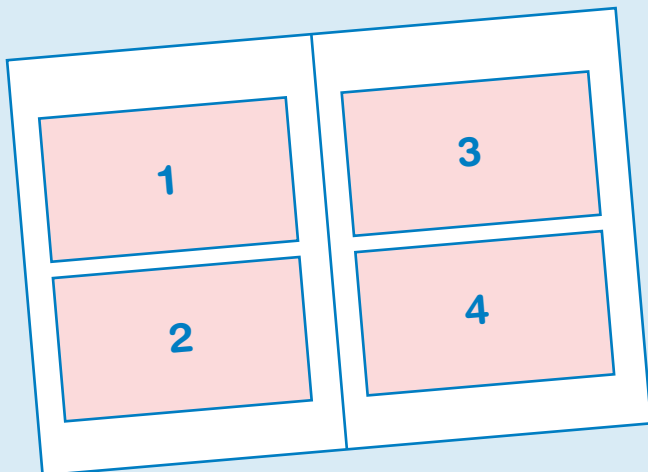

EEK! A SLIME!
I MUST DESTROY IT

EEK! A SLIME!
I MUST
DETONATE
MYSELF
IMMEDIATELY

100%
IMPROVEMENT!

As an advanced technique, you can imitate
popular American comic book page layouts.
